PROFESSIONAL SUMMARY

Senior Product Manager with 12+ years across B2B and B2C SaaS, streaming, and Tier 1 telecom. Currently the sole PM at a US enterprise SaaS company, reporting directly to the CEO. Track record of shipping production AI features, simplifying complex onboarding and subscription flows, and leading platform modernisation in data-heavy, integration-rich environments. Equally comfortable owning end-to-end product strategy, running discovery with customers, and working hands-on with engineering to translate ambiguous problems into shipped outcomes.

CORE SKILLS

Product Strategy & Discovery • Customer Onboarding & Activation • Subscription & Monetisation Design • AI Product Delivery (LLMs, MCP, prompt engineering) • Third-Party Integrations & Platform Architecture • A/B Testing & Experimentation • Data-Informed Decision Making (SQL, Looker) • Regulatory Compliance (LGPD, GDPR, TCPA) • Cross-Functional Leadership • Stakeholder Management

WORK EXPERIENCE

Senior Product Manager | ClickPoint Software, USA (Remote) Sep 2023 – Present

Sole PM at a 15-person B2B SaaS company, reporting to the CEO. Lead product across LeadExec and SalesExec, two integration-heavy platforms serving Fortune 500 enterprise clients (AHS, Rentokil, TruGreen, Albizu University) across home services, finance, insurance, and education. Own the full surface area: customer onboarding, lead capture and routing, buyer experience, third-party integrations, and analytics. Run a lean squad of two engineers, a designer, and a project manager. Drive discovery directly with customers and set company-wide OKRs.

- Shipped a production AI Onboarding Assistant that guides enterprise clients through full product setup in **under 15 minutes**, replacing a process that previously took days of hands-on customer success work. Built on LLMs and the Model Context Protocol with deterministic guardrails: schema-bound tool calls, validation at every boundary, and human confirmation before each execution. **Zero unsafe tool calls in production since launch.**
- Designed and shipped a real-time compliance integration layer covering consent verification (TrustedForm), fraud scoring (IPQS), phone validation (PureCallerID, Trestle), and TCPA/Do Not Call screening. Every inbound lead is now automatically validated and quarantined or rejected before reaching the buyer.
- Redesigned the integrations architecture for enterprise clients with a Lead Type inheritance model that replaced repetitive manual setup with a single configuration that propagates automatically across the platform. Cut integration setup time from hours to minutes and unblocked the Home Depot enterprise account.
- Embedded continuous discovery and A/B testing into the product process, running regular customer interviews, validating feature bets with experiments, building Looker dashboards directly, and using AI-assisted workflows (Claude, Cursor) for research synthesis and rapid prototyping.

Product Manager | Brasil Paralelo, Brazil Oct 2021 – Mar 2023

Fast-growing B2C streaming platform that scaled past 500K paid subscribers, with a complex 15-plan subscription system. Hired as the first PM, reporting to the CTO. Built the product function from scratch and scaled it to lead 2 PMs and a squad of 60 engineers across the streaming platform, web and mobile apps, payments, and CRM. Owned the full subscription lifecycle: acquisition, onboarding, monetisation, and retention.

- **Drove 2x subscriber growth (250K to 500K+) and doubled annual revenue in 12 months** by simplifying a fragmented 15-plan subscription system into a clean Good/Better/Best model and launching new content offerings.
- Migrated **335,000+ active subscribers** to the new pricing architecture with zero downtime, protecting A\$730K in ARR from high-risk legacy accounts. The new model generated A\$7.7M in projected lifetime profit and removed the manual support overhead that had been blocking scale.
- Shipped a self-service cancellation and retention flow that achieved a 71% self-serve rate and reduced support tickets by 65%. Built-in exit surveys captured structured churn signals that directly shaped the next quarter's retention roadmap.

Product Owner & Project Manager | TIM Mobile, Brazil Feb 2014 – Oct 2021

Tier 1 mobile telecom operator serving 60M+ subscribers. Started as Senior Project Manager (2014–2017) delivering enterprise data infrastructure, then moved into a Product Owner role (2017–2021) leading data platform modernisation and regulatory

compliance. Reported to the CTO of IT. Led a team of 4 data engineers, 1 data scientist, and 2 data analysts across mission-critical legacy systems.

- Led the company's LGPD/GDPR-equivalent privacy transformation across legacy and modern systems, reaching a **90% compliance score** and reducing data breach incidents by 40%. Safeguarded the company against millions in potential regulatory fines.
- Replaced fragmented data systems with a unified data platform that gave business teams direct, self-service access to customer insights for the first time. Improved reporting speed by 40% and unlocked downstream analytics use cases across marketing, retention, and care.
- Delivered ML-driven churn prediction tools that flagged at-risk customers and triggered proactive support workflows, reducing churn by 15% and cutting call handling time by 20%.

Product Manager | OnGame Entertainment, Brazil Sep 2011 – Nov 2013

Digital entertainment publisher pioneering the Free-to-Play commerce model in Latin America. PM on a portfolio of online products, managing monetisation, virtual economy design, and international launches across Latin America.

- Grew product revenue by 80% through data-driven pricing changes, promotional events, and segmentation of high-value customer cohorts.
- Managed end-to-end localisation and go-to-market for international product launches across Latin America, exceeding 50,000 downloads in debut week.

EDUCATION

Product Management Specialisation — British School of Creative Arts, São Paulo, Brazil

Bachelor in Business Administration — FMU, São Paulo, Brazil

SELECTED PROJECTS & SIDE WORK

- **Product Portfolio (Live Repository)** — Public collection of product case studies and technical breakdowns at github.com/felipefaraone/product-portfolio, including the MCP-based AI Onboarding Assistant shipped at ClickPoint.
- **AI Setup Patterns (Open Source)** — Public write-up at github.com/felipefaraone/ai-setup-patterns covering lessons from running an LLM agent in a regulated B2B workflow: deterministic guardrails, tool design, and the redesign from a single monolithic agent into smaller specialised helpers.
- **MyBJJ Academy App (Solo Build)** — Designed, built, and shipped a production web app for a Sydney Jiu Jitsu academy: authentication, role-based access, member check-in, transactional email. Solo end-to-end, real users in production. Code at github.com/felipefaraone/mybjj-app.
